Legend: ■ Highly Recommended ▲ Recommended ● Not Recommended

Notes:

- 1) 12' widths provide virtually seamless installation.
 - 2) Not recommended for commercial kitchens or food processing areas.
 - 3) Only in areas not requiring conductive or static dissipative flooring.
 - 4) Excellent stain and chemical resistance.
 - 5) Slip resistant polish and/or mats recommended in wet areas.
 - 6) Provided local and federal recommendations are met.
 - 7) Some solutions contain stainants that may permanently damage flooring if not cleaned up immediately. Asphalt driveways, particularly those recently installed or resealed with coal tar, can cause permanent staining in prominent traffic areas. Regular maintenance and floor mats placed at entryways will reduce or eliminate coal tar stains. Congoleum recommends the use of latex emulsion asphalt sealers where possible.
- * CX Series and TT Series do not comply with ASTM specifications for gauge requirements.

Not recommended for:

- Automotive maintenance areas
- Automotive showroom unless flooring is protected from oil spills and contact with rubber tires
- Commercial kitchens
- Food processing areas
- Walk-in freezers
- Paint, dye and ink manufacturing facilities
- Outdoor areas exposed to elements
- Ramps
- Walls/Ceilings
